

Dos & Don'ts of Cleaning Acrylic

There are some cleaning products that you should avoid because they can scratch or fog your acrylic.

- Use only a very soft damp cloth when cleaning acrylic surfaces. Do not use paper towels because they may scratch the surface. Use something soft like a microfiber cloth.
- Never use any scouring compounds on your acrylic. Avoid ammonia-based products, like Windex or other home glass cleaners, because they contain harmful chemicals that will damage the surface, leaving it cloudy looking.
- Soapy water is safe and effective.
- Brillianize Plastic Cleaner is also a good choice for cleaning your acrylic and it comes with a microfiber cloth.
- Never use the same cloth that you clean other household items with – it can retain dirt, grit, and chemical residues that may harm your acrylic items. We recommend using a new or designated cloth for your acrylic care.
- If your plexiglass does get scratched, scratches on acrylic can be removed with Novus products.
- Should anything ever stick to an acrylic surface (such as an adhesive label or gummy substance) do not use any type of solvent. Instead, try soapy water or a product designed to be used on acrylic.
